# Open an editor

`$ gedit test1.py &` # "&" means run in background  
so you can still type here.

Opens an  
editor  
window...  
...make a  
change...and  
**Save!**

A screenshot of the gedit text editor window. The window has a menu bar with 'File', 'Edit', 'View', 'Search', 'Documents', and 'Help'. Below the menu bar is a toolbar with icons for 'New', 'Open', 'Save', 'Close', 'Print', 'Undo', 'Redo', 'Cut', 'Copy', 'Paste', 'Find', and 'Replace'. The main text area shows the contents of the '.bash\_profile' file, which includes comments and code for setting aliases, functions, and environment variables. The text is as follows:

```
.bash_profile
# .bash_profile

# Get the aliases and functions
if [ -f ~/.bashrc ]; then
    . ~/.bashrc
fi

# User specific environment and startup programs

PATH=$PATH:$HOME/bin
BASH_ENV=$HOME/.bashrc
USERNAME=""

export USERNAME BASH_ENV PATH
```

# Now run it

With...

```
$ python test1.py
```

...your output appears here...
